Prof. Mark Smithers

Grand Canyon University

Here is a first high fidelity render of the Milestone 1 assignment. Moving forward I will more than likely split all the foundations of this application to three separate forms as needed and in further development. Each section features its own unique elements on-screen.

The far left side of the screen will feature a Live Chat feature, the middle part of the screen will feature a video/media player aspect, as for the right side of the screen, this will feature the Wonderful Wallet Store itself. With further development, the chat feature will be able to send

and save messages to the “support system”. The media player will be able to load your local songs/ movies and be functional when selected inside of the list.

The store aspect will be loaded up with items, along side an account and information page, as well as a “checkout page” to go along with it.
